NOVEMBER 2022 | VOLUME 33 NO. 11

NOVEMBER TIN MARKET REVIEW

Kuala Lumpur Tin Market (KLTM)

The KLTM continued to remain quiet with no trade being transacted during the month of November, the same as in the preceding ten consecutive months. The market was closed on the 18th and 28th November in conjunction with the country's pre and post 15th General Election day holidays, respectively, as announced by the caretaker Government.

London Metal Exchange (LME)

Tin trading on the LME in November was mostly on an upward trend, a rebound from the decline recorded in October. The tin price during the month followed the same trading pattern as that of the other base metals traded on the Exchange.

The market commenced the November trading month at US\$18,125 per tonne for cash tin and US\$18,150 per tonne for 3-month tin. It slid the next day to record the month's lowest price level for cash tin at US\$18,050 per tonne on 2nd November. The market continued to ease the subsequent day to record the month's lowest price level for 3-month tin at US\$17,900 per tonne on 3rd November, before rebounding at end of the trading week.

The tin price strengthened during the early days of the second trading week, before being checked by a technical

correction. Thereafter, it continued its upward momentum towards end of the trading week.

The market scaled upward during the first half of the third trading week due to strong buying support and in line with the upward momentum of the other base metals traded on the LME. It was during this period that the month's highest price level for cash and 3-month tin were recorded at US\$24,525 and US\$24,150 per tonne, respectively. They were both recorded on 16th November. Following that, it softened to end the trading week lower.

The following trading week saw uncertain sentiment that resulted in the tin price staying somewhat flat during the early days of the week, before inclining towards end of the week.

During the short final trading week, the market gained further ground to close the trading month at US\$22,975 and US\$22,675 per tonne for cash and 3-month tin, respectively.

The November average LME cash and 3-month tin price were US\$21,136 and US\$21,004 per tonne, respectively.

NEWS HIGHLIGHT

MSC Hit by Sharp Drop in Tin Prices

Malaysia Smelting Corp Bhd's (MSC) performance was affected by the sharp drop in tin prices, which was reflected in its third quarter (3Q22) report. Fears of a global recession, lower tin demand due partly to China's zero-Covid policy and easing of scarcity as smelters resumed operations saw prices of tin fall by 26% year-on-year (y-o-y) to RM104,700 per tonne in the quarter.

MSC was also impacted by higher freight and energy prices during the period. However, it is expecting improved production yield and efficiency from the use of the more efficient Top Submerged Lance furnace technology at its Pulau Indah smelting facility to absorb cost pressures.

"We expect to generate cost savings of 30% with lower manpower and carbon emissions," said group chief executive officer Datuk Patrick Yong in a statement. As for our tin mining arm, we are continuously exploring ways to enhance our mining productivity at the Rahman Hydraulic Tin mine in Klian Intan."

For 3Q22 ended Sept 30, MSC posted a net loss of RM31.3mil, or loss per share of 7.5 sen, on RM344mil in revenue (versus a net profit of RM28.9mil on RM218.5mil

revenue in 3Q21). It said its smelting arm posted a net loss of RM46mil in the quarter as compared to a net profit of RM4.9mil in the same quarter of the previous year. Meanwhile, net profit for the mining operations fell by 72.6% y-o-y to RM8mil on the back of lower tin prices and a one-off provision for legal case settlement of RM4.7mil.

The loss in 3Q22 was exacerbated by longer-than-expected furnace outage, it said. For the nine months, MSC's net profit was up 34% y-o-y to RM72.5mil, or earning per share of 17.2 sen, on the back of a 35% y-o-y rise in revenue to RM1.1bil. The jump in revenue and profit was mainly driven by higher average tin prices over the period and after taking into consideration the softening prices in 3Q22.

"We are strengthening MSC's foundation to allow us to better address the challenges and withstand external headwinds. Nonetheless, tin's long-term prospects remain positive as tin has been identified as a key component in emerging technologies including for lithium-ion batteries for electric vehicles," Yong said.

NEWS ROUND-UP

Cornish Metals Expands its Promising South Crofty Project

Cornish Metals (CM) has reached agreement to lease mineral rights in an area with "significant exploration potential", expanding the already promising South Crofty Project.

The company has been working since 2016 to bring the South Crofty mine back into production when it acquired the rights after the mine had been closed since the late 1990s. The company was recently subject to a £40 million investment to progress work at the mine. CM plans to dewater the existing mine infrastructure before publishing a Feasibility Study for the project.

The Feasibility Study will focus on the South Crofty Underground Permission Area (SCUPA), where Cornish Metals will be allowed to mine. However, there is significant potential outside of this area. Historical mining took place in the South Carn Brea Exploration area, just to the south of the SCUPA. The company will examine the

Great Flat Lode, a formation of high-grade tin mineralization and also the Wide Formation, a tin-bearing structure believed to lie beneath and to the north of the Great Flat Load.

The company already has the mineral rights for much of this area. However, certain regions are owned by Roskear Minerals LLP. CM, in its recent announcement, has agreed to lease this area from Roskear, enabling new exploration and potential mining.

The Prospective Lease on the 49-hectare area is for a period of five years and can be extended for another five more years, if required. If successful targets are found, this can be converted to a Mining Lease anytime during the lease period. An annual rent will be paid to Roskear for the Prospective Lease, with a tin price-based sliding net smelter return royalty on any mineral production under the potential Mining Lease.

Tantalex Awarded Mining License for its TiTan Project

Tantalex Lithium Resources (TLR) has been awarded a mining license for its TiTan project in the Manono region of the Democratic Republic of Congo (DRC).

The TiTan project is located in the Manono "pegmatite corridor", some 30km southwest of Manono, a mining site that was exploited for cassiterite and columbite-tantalite between 1913 and the 1980s. The company plans to work on this previously untapped potential after a recent work suggests that the mineralisation extends southwest of the mine.

TLR has been working to advance the project quickly. Its concentration plant has already been tested in Manono and is ready for assembly on site. Production is scheduled to start in March 2023 with output forecast at 120 tonnes per month tin concentrate and 20 tonnes per month tantalum concentrate. The company is also developing the Manono Tailings project with plans to rework the waste from the historic mine to recover lithium and tin.

Positive Results at Depth for Great Pyramid

TinOne Resources' latest assay results show high-grade mineralisation below the Great Pyramid's historical resource.

Tin mineralisation at Great Pyramid has been known for over a century. Despite some small-scale mining, significant exploration only began during the 1960s. A mineral resource was completed in 2014 for TNT Mines, its previous owner, with an Inferred Resource of 5.2 million tonnes of ore at a grade of 0.2 per cent Sn. Despite this work, tin mineralisation remains open at depth, with much of the resource being within 40 meters of the surface.

Earlier this year, a drill campaign was launched to confirm this resource, and test the depth and lateral extension of the mineralized zone. Results to date have been positive, both confirming and returning higher tin intersections to the historical resource.

These latest drill holes are the deepest results released. Prior to this, the deepest hole drilled was 263.5 meters, whereas drill hole 22GPRC003 reached 430 meters, and delivered "outstanding results": tin mineralisation is reported in three significant intercepts from depths of 308 to 372 meters, at grades ranging from 0.22 to 0.46 per cent Sn. The company's spokesman commented on the result saying it "demonstrates the continuation of the system to depth with excellent grade" a significant step towards expanding the resource.

Other results released were also positive, continuing to confirm the historic resource and supported ongoing work to determine stratigraphic control of the tin mineralisation.

Severn's MRE Results Indicate Higher Contained Tin

Stellar Resources Limited (SRL), an Australian mining company, has announced the results of an updated Mineral Resource Estimation (MRE) for its flagship Heemskirk Tin Project.

Heemskirk is made up of several tin deposits. Severn, which is its largest, has seen significant drilling over the last two years. The drilling comes in a series of phases namely, "Phase 1", "Phase 2A" and "Phase 2B" with the aim to expand the Resource at Severn, particularly in the Indicated category.

The recent update, using results from the first two phases of drilling, has increased Severn's Total Resource by 29 per cent. Severn now confirms 46,764 tonnes of contained tin, bringing the total contained tin for the Heemskirk Tin Project to 81,976 tonnes with overall tin grade remained steady at 1.1 per cent Sn.

There have also been significant additions to the Heemskirk Indicated Resource from improvements to the

south and west of the Severn deposit. The Indicated Resource has increased by 24 per cent to 2.6 million tonnes at 1.1 per cent Sn and now contains 29,798 tonnes tin metal. The company's spokesman said the update "not only significantly increases the Total MRE but also increases the Indicated Mineral Resource and level of confidence in the Heemskirk Tin Project."

Further improvements to the MRE are to be expected driven by results in the ongoing Phase 2B drill programme, which as the company's spokesman continues "is focused at further increasing resources in the Indicated category". Phase 2B will target high grade-thickness mineralisation of the Severn deposit. SRL will include these results in an upcoming MRE update, planned for mid-2023.

* : The figures include high-grade tin (99.9% Sn) imported for consumption.

** : Preliminary.

n.y.a : not yet available

Note : Local consumption of tin metal refers to the use of tin in a particular application.
Sales to manufacturing industries have been used as proxy for consumption except
in the case of manufacture of tinplate which are actual tin consumption data.
