The Malaysian Tin Bulletin is published by the Secretary of the Tin Industry (Research and Development) Board, Ministry of Natural Resources, Environment and Climate Change. The Bulletin is prepared from information obtained from official or other sources believed to be reliable and accurate. The Tin Board, however, cannot accept any liability for any error or omission therein.

OCTOBER TIN MARKET REVIEW

London Metal Exchange (LME)

Influenced largely by strong demand, tin trading on the LME during the month of October was mostly upbeat. Trading was stronger than that recorded during the September month, and again followed the same trading pattern as the other base metals traded on the Exchange.

The October average LME cash tin price was US\$24,618 per tonne while the average 3-month tin price was US\$24,878 per tonne.

The market began the October trading month at US\$23,900 per tonne for cash tin and US\$24,200 per tonne for 3-month tin, both being their respective lowest price level for the month. Bolstered by encouraging demand, the tin price increased afterwards to end the trading week higher.

Continuing strong demand boosted the tin price at the opening of the second trading week. It slid the next day before bouncing back towards end of the trading week.

The up-trend persisted during the first half of the third trading week to reach the month's highest price level on 18th October for both cash and 3-month tin at US\$25,450 and US\$25,675 per tonne, respectively. Sentiment was bullish with buyers actively participating in the market. Thereafter, it dipped to end the trading week lower in-line with that of the other base metals traded on the Exchange.

The tin price scaled upward during the early days of the fourth trading week before retreating towards end of the week due to much selling that took advantage of the earlier higher prices.

The decline continued during the short final trading week to record the month's closing at US\$24,550 and US\$24,725 per tonne for cash and 3-month tin, respectively.

NEWS ROUND-UP

Cornish Metals Announced Updated MRE and Commissioning of Water Treatment Plant

Cornish Metals has announced an increased indicated and inferred mineral resource at its South Crofty mine, along with the onset of the commissioning process of its mine water treatment plant.

Originally opened in the 16th Century, the historic South Crofty mine was acquired by Cornish Metals in 2016 following its closure in 1996 and subsequent flooding. It is the world's 4th highest-grade tin mineral resource.

The updated mineral resource estimate follows a campaign of digitisation and modelling of historic data in the Lower Mine tin-only section of the project, as well as additional drilling. The results increased the Indicated resource by 39 per cent from the 2021 estimate to 2.896 Mt grading 1.50 per cent Sn. Inferred tonnage improved by 35.6 per cent to 2.626 Mt grading 1.42 per cent Sn.

The company's spokesman said, "This is another positive development for South Crofty as we advance the project through to delivery of a feasibility study by the end of 2024, and continue to demonstrate the potential to increase the project's mineral resource and mine life."

The updated MRE comes as the company commences the commissioning of a mine water treatment plant, with a capacity of 25,000 cubic meters of water per day. The plant will use High-Density Sludge process technology to treat the raw mine water before draining into the nearby Red River. The commissioning and construction are expected to take up to three weeks, with full dewatering of the mine anticipated to commence by the end of October.

Alphamin Announced Third Quarter Results and Mpama South Progress

Alphamin Resources Corporation (ARC) has announced mine production of 3,104 tonnes of tin for the third quarter of 2023, a marginal 1 per cent decrease compared to the previous quarter.

ARC produces 4.0 per cent of the global mined tin. In early October, the company released its third quarter operational and financial update, including an overview of the development progress of its Mpama South mine in North Kivu, Democratic Republic of Congo.

During the third quarter of 2023, the company processed 100,395 tonnes of ore, an increase of 1 per cent compared to the previous quarter. Overall plant recovery was unchanged at 76 per cent. Sales volumes of 3,111 tonnes were consistent with the previous quarter, showing a marginal increase of only 1 per cent. The tin price achieved averaged \$26,557 per tonne. Earnings before interest, taxes, depreciation, and amortization (EBITDA) rose by 8 per cent to \$38.3 million. All in sustaining costs (AISC) rose by 6 per cent to \$14,812 per tonne. The higher AISC were due to the timing effect of sus-

taining capital expenditure, elevated diesel prices and increased underground development at Mpama North.

At Mpama South, a further 988 meters of underground development was completed, bringing the total to 2,448 meters, with a 64 per cent increase in development rate this quarter. This aligns with the company's two-year underground mine plan aimed at expanding tin production from the 2024-2025 financial year, requiring approximately 1,200 meters of underground development in the fourth quarter of 2023. Delays due to infrastructure damage on the primary transport route to Mpama South mean that the commissioning of a new processing plant may be pushed back to early 2024.

ARC anticipates the Mpama South project will enhance its combined annual tin production from around 12,000 tonnes to approximately 20,000 tonnes in 2024. Further financial results are expected in mid-November 2023.

Tin is Classified a Critical Mineral for Strategic Development in Indonesia

Indonesia's Ministry of Energy and Mineral Resources (ESDM) has officially designated 47 minerals, with a special focus on tin and nickel, as critical for Indonesia's strategic and energy objectives.

According to Indonesia's latest review of critical minerals, tin has been highlighted for its substantial role in the production of electric vehicle batteries and battery energy storage systems. These critical applications align with Indonesia's overarching energy transition plans.

A spokesperson at the ESDM emphasized the government's commitment to sustainable management and prioritization of tin and nickel reserves. This prioritization extends to the

downstream processing of these minerals. The criteria for their critical classification are grounded in supply, economic significance, and their applications in high-tech industries.

Earlier this year, Governor Andi Widjajanto of the National Defense Institute of Indonesia (Lemhannas RI) has been advocating for the recognition of tin from the Bangka Belitung Islands as a national strategic commodity. Widjajanto underscored the potential of tin to enhance Indonesia's global standing and called for a comprehensive overhaul of tin mining governance. The primary focus remains on legalising all tin mining operations while fostering close collaboration with the state-owned PT Timah Corporation for future growth.

Andrada Commenced Exploration at Brandberg West Mine

Andrada Mining Limited has announced the commencement of an initial exploration programme at its Brandberg West mine project in Namibia.

The Brandberg West mine is located 110 km west of the company's Uis Mine. It was owned and operated by Gold Fields until its closure in 1980, historically producing over 12,000 tonnes of tin and tungsten concentrate.

The company's spokesman commented "The project provides an exciting opportunity for us to duplicate the development process we have successfully implemented at Uis, by taking it from an abandoned historical operation, into a fully-fledged mine. The historical figures show that [Brandberg West] has the potential to double the current volume of tin concentrate produced at Uis".

The Brandberg West mine has multiple documented occurrences indicating the presence of a large-scale tin-tungsten-copper system. The presence of copper will be investigated as a potential by-product. The area is dominated by a folded sequence of metasediments trending NNE-SSW, with multiple generations of quartz veins, some associated with hydrothermal tin, tungsten, and copper mineralization.

The exploration programme is divided into two phases. The first phase will investigate the polymetallic mineralisation of the historical opencast operation through a detailed 3,000 meters drilling campaign due to commence before the end of 2023. The second phase exploring the wider mine area will follow up on targets identified by historical and 2021 exploration programmes.

* : The figures include high-grade tin (99.9% Sn) imported for consumption.

n.y.a : not yet available

Note : Domestic consumption of tin metal refers to the use of tin in a particular application.

Sales to manufacturing industries have been used as proxy for consumption except in the case of manufacture of tinplate which are actual tin consumption data.
