- Production, Number of Mines & Employment by Mining Methods
- Malaysian Production, Import & Export
- Malaysia's Domestic Tin Consumption
- World Mine Production
- World Refined Tin Consumption

The Malaysian Tin Bulletin is published by the Secretary of the Tin Industry (Research and Development) Board, Ministry of Natural Resources and Environmental Sustainability. The Bulletin is prepared from information obtained from official or other sources believed to be reliable and accurate. The Tin Board, however, cannot accept any liability for any error or omission therein.

JANUARY TIN MARKET REVIEW

London Metal Exchange (LME)

Influenced largely by strong demand, tin trading on the LME during the month of January was mostly on an upward momentum, and again followed the same trading pattern as the other base metals traded on the Exchange.

Tin trading commenced the January month at US\$25,150 per tonne for cash tin and US\$25,425 per tonne for 3-month tin. Thereafter, the tin price softened to end the first trading week lower.

The tin price inched-up at the start of the second trading week before retreating towards mid-week to record its lowest price level for the month at US\$24,025 and US\$24,350 per tonne for cash and 3-month tin, respectively on 10th January. Bolstered by encouraging demand, it revived towards end of the trading week.

Continuing strong demand boosted the tin price higher during the third trading week after staying somewhat flat earlier on.

After going through a brief technical correction at the beginning of the fourth trading week, the tin price rose to reach the month's highest price level on 26th January for both cash and 3-month tin at US\$26,550 and US\$26,725 per tonne, respectively. Sentiment was bullish with buyers actively participating in the market.

Trading, however, went the opposite direction during the short final trading week to close the January trading month at US\$26,000 and US\$26,200 per tonne for cash and 3-month tin, respectively. According to a trader, the decline was due to profit taking by investment funds, which took advantage from the earlier higher prices.

The average LME cash tin price recorded in January was US\$25,211 per tonne, whilst the average 3-month tin price was US\$25,443 per tonne.

NEWS ROUND-UP

Renison's Ore Reserve and Mine Life Updated

Metals X has announced an updated Life of Mine Plan for its Renison Bell mine, Australia's largest tin mine. The company owns 50 per cent of the Renison project through the Blue-stone Mines Tasmania JV Pty with Yunnan Tin Corporation. The historic mine is expected to operate until at least 2035.

The company highlighted that the total Renison Bell Proved and Probable Reserve stands at 8.225 million tonnes at 1.48 per cent Sn for 121 kilotonnes contained tin. The cut-off grade has increased from 0.65 per cent Sn to 0.75 per cent Sn following economic analysis undertaken in the Life of Mine Plan update.

There has been a 7 per cent decrease in total Reserve ore and a 1.3 per cent increase in Reserve tin grade, yielding a 5.7 per cent decrease in Reserve contained tin at Renison underground over the last 12 months. The company projects a mine life of over ten years, with grade anticipated to increase as the bulk of ore mined will be from the high-grade Area 5 and Leatherwood ore bodies. Production is therefore anticipated to ramp up to 955 kilotonnes ore per annum from 2025.

Average site Life of Mine All-in Costs have been estimated at AUD\$26,247 per tonne Sn, inclusive of Capital Costs of AUD\$3,832 per tonne Sn and Operating Costs of AUD\$22,415 per tonne Sn.

The company's spokesman commented, "The updated Life of Mine Plan now extends out to 2035, with the first 10 years averaging more than 10,000 tonnes of tin per annum. The Life of Mine Plan does not yet include the additional contribution from the Renison Tailings Retreatment (Rentails) project, which provides an opportunity for the production of additional tin at a lower production cost."

The Rentails project accounts for an additional Probable Ore Reserve of 99 kilotonnes contained Sn from Measured Resources of 23.9 million tonnes at 0.44 per cent Sn giving 104 kilotonnes contained tin. The proposed project will treat the historical tailings over an eleven-year period at a rate of 2 million tonnes per year, producing approximately 5,400 tonnes of tin per year.

Uganda Fixed Minimum Tin Export Grade at 99.85 per cent

Dr Ruth Nankabirwa Ssentamu, Uganda's Minister of Energy and Mineral Development, signed a new statutory instrument on 22nd December 2023 that fixed the minimum purity of tin exports as 99.85 per cent, emphasising requirements for local value addition. Previous regulations had stipulated a minimum grade ranging between 67 to 70 per cent. Dr Nankabirwa stated that similar purity standards for other minerals including vermiculite, tantalum and tungsten will be established soon.

The new legislation provides much needed clarity following the ban placed on the export of unprocessed minerals and concentrates and the Government's demand for local value addition.

Uganda is a small tin producer with less than 1,000 tonnes per annum of mine production, and as of December 2023 no

production of refined tin. The country has a history of artisanal production and there are only three mechanised tin projects underway, including the Woodcross Resources' Ntungamo and Isingiro exploration projects.

Announcing the statutory changes, Dr Nankabirwa commented that Uganda "will make much more money in this processed tin than the semi-processed tin". The Minister highlighted the recent completion of Woodcross Resources' tin refining facility at Mbarara as an example of the local addition of value to tin production.

The initiative aligns with a wider policy directive from the President of Uganda, Yoweri Museveni, to cease the export of unprocessed minerals.

Renewable Energy Usage Update at First Tin's Taronga Project

First Tin plc, a tin exploration company, has announced its intention to use mainly renewable energy at its Taronga project in Australia, focusing on solar power for its crushing operations.

The company has been developing the low-capex project, with an emphasis on environmental sustainability after acquiring Taronga in 2022. A 2023 Mineral Resource Estimate at Taronga reported 71.9 million tonnes at 0.12 per cent Sn in the Measured and Indicated categories.

A variety of options including connection to the power grid, use of diesel generators and wind turbines have been examined during the recent scoping study. Taronga Mines Pty Ltd, the subsidiary of First Tin responsible for the project, confirmed that a combination of gas engines for the base load and night-time usage, supplemented by solar panels for daytime augmentation, is the most cost-effective and carbon-friendly approach.

The company's spokesman commented, "These positive results represent significant energy cost savings and support our commitment to minimizing First Tin's environmental and CO₂ footprints, as we assist the current global clean energy and technological revolution."

To maximise the benefits of the solar generation and minimize carbon emissions, the main crusher will only be operated during daylight hours. The preliminary scoping study identified that five 2 megawatt gas engines will be required plus solar panels generating 10 megawatt during times of peak solar radiation. A solar efficiency estimate of 65 per cent during peak daylight hours, and overall efficiency of 16.7 to 20.1 per cent, indicates that the overall amount of site power generated by solar is estimated to be 53 per cent of total demand.

Current estimations of the operating costs for solar and gas are around AU\$0.01 per kiloWatt hour and AU\$0.24 per kilo-Watt hour, respectively. There is additional capital cost for oversizing the crushing facility, which is expected to be recouped within 3.5 years of operation. This brings total power generation costs to AU\$0.12 per kiloWatt hour, considerably lower than the estimate of AU\$0.29 per kiloWatt hour for grid power, and represents a reduction in carbon emissions of around 14,780 tonnes per annum. These estimates are to Level 3 (Scoping Study) accuracy only at this time, and that Level 5 (Feasibility Study) accuracy estimates are currently in progress.

Advancements Update at Cornish Metals South Crofty Project

Cornish Metals Inc, mineral explorer and developer, has provided an update on the advancements of its South Crofty project and a look ahead to the company's objectives in 2024.

In September 2023, the company announced the completion of an updated Mineral Resource Estimate, marking a 31.6 per cent increase in the Indicated category for contained tin in the Lower Mine. The South Crofty Resource currently stands at 2.90 million tonnes Indicated at 1.50 per cent Sn and 2.63 million tonnes Inferred at 1.42 per cent Sn. Other significant developments included the commissioning of the water treatment plant, encouraging results from ore sorting test-work, and numerous underground refurbishments.

Looking at the year ahead, Cornish Metals anticipates further progress in the ongoing dewatering of the historic mine to 360 meters below the surface. The company plans to start underground infill drilling, and aims to complete a comprehensive 14-hole, 9,000 meters Wide Formation exploration drill programme. This programme has the potential to increase the Mineral Resource and extend the mine's operational lifespan.

The South Crofty Preliminary Economic Assessment (PEA) is scheduled to be completed in the first half of 2024, preceding the publication of the Feasibility Study. Cornish Metal's spokesman reflected on the company's performance in 2023, emphasising the significant milestones achieved, particularly the construction of the water treatment plant and the commencement of dewatering. He stated "activity levels are expected to remain high through 2024 with more important milestones to be met as Cornish Metals works to further progress the South Crofty project towards a construction decision".

Giving further detail on Feasibility Study progress, the company reported that it has completed the geotechnical test-work, numerical modelling of the proposed underground mining methods and stope designs, the initial phase of a metallurgical testwork programme, and the design of the mineral processing plant. Work is currently underway on the underground mine design.

* : The figures include high-grade tin (99.9% Sn) imported for consumption.

Note : Domestic consumption of tin metal refers to the use of tin in a particular application.
Sales to manufacturing industries have been used as proxy for consumption except
in the case of manufacture of tinplate which are actual tin consumption data.
